

HCT Sharjah Women's College: UAE iGO

This HCT Sharjah Women's College app is very popular among students! It currently has between one and five thousand installs, and a 4.9/5 star review!

[Higher Colleges of Technology](#) (HCT), the largest system of universities in the UAE with 17 campuses and over 20,000 students has selected Appery.io as its mobile platform for its computer science curriculum. This collaboration aims to prepare HCT students to meet the great demand for mobile apps required in the UAE in both private and public government and business sectors.

Keeping track of bus schedules can be especially hectic for young students, especially when they're keeping track of multiple lines and times, and a fluctuating schedule. In turn, the bus drivers, who deliver students to/from home/school, are also keeping track of multiple lines and schedules. Students at the HCT Sharjah Women's College created an app to help bus drivers and students alike better navigate the transportation system.

UAE iGO helps the bus driver locate the student's residence by scanning the barcodes in their smartphones. By doing that, their locations will appear and get pinned on the driver's GPS, then he'll easily follow the pin-points and drop/pick the students from/to their home.

The app also assists students with keeping track of their trip-line by looking at the GPS built-in the app. The app will also notify the students when the bus will arrive at their location or when they have reached their destination.
